

CiRBA Overview

The Fastest, Safest Path to Server Consolidation and Virtualization

INTEROP[®]
THE LEADING BUSINESS TECHNOLOGY EVENT

CiRBA Data Center Intelligence

- DCI is Analysis Software that provides:

Transformational Analytics

Rapidly analyzes and visually maps the safest path to an optimally transformed data center

Operational Analytics

Continually audits the environment to maintain the optimal state despite constantly changing constraints and configurations

**Technical
Constraints**

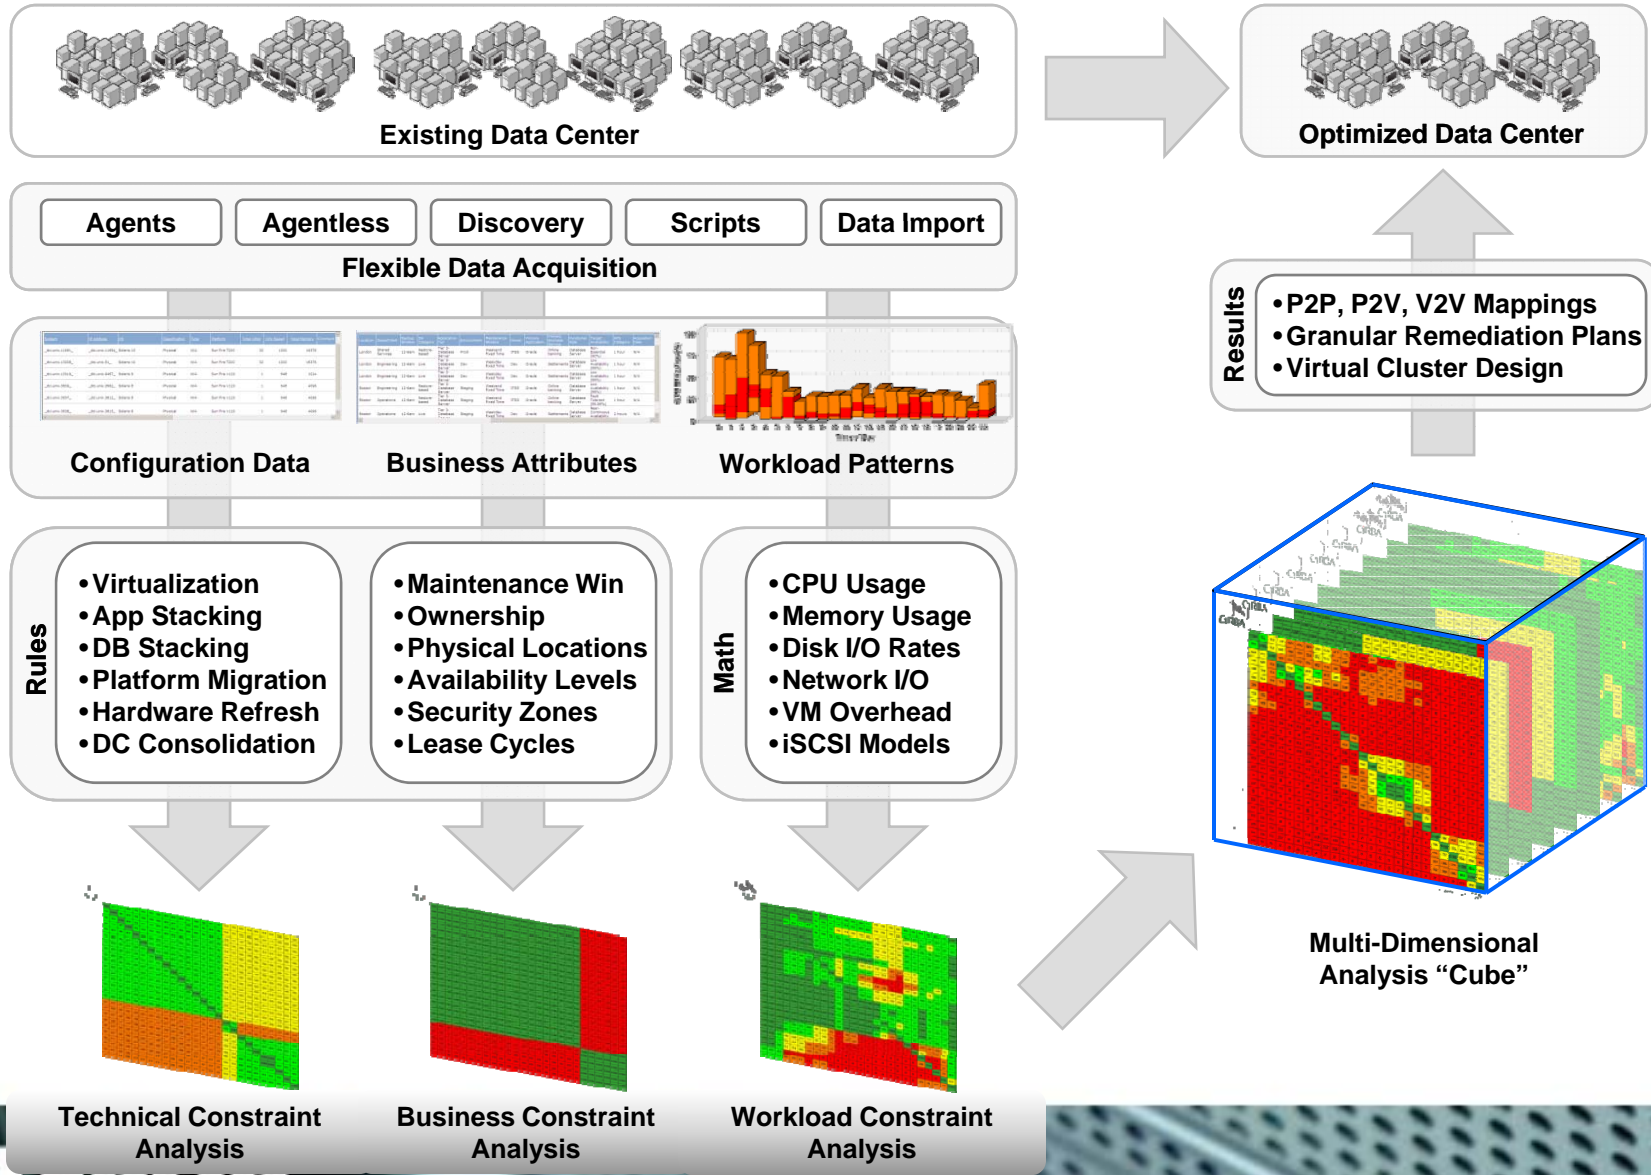

**Business
Constraints**

**Workload
Constraints**

Transformational Analytics

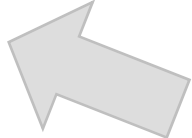

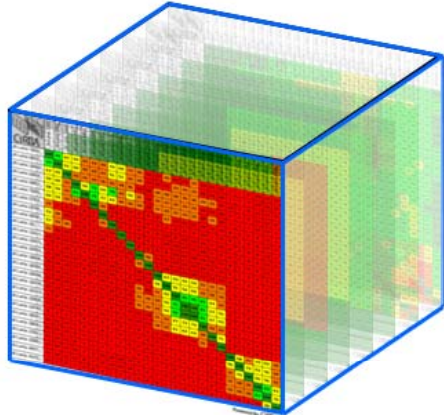

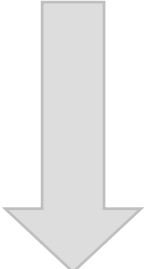

Operational Analytics

OPTIMIZE

- Proactive Placement**
VM placement based on anticipated daily utilization
- VM Rebalancing**
Optimizing VMs onto existing hosts using proper constraint models
- ...
- TCO Optimization**
Optimization of environment against financial metrics
- Chargeback**
Aggregate utilization tracking by department or logical group
- ...

GOVERN

- DRS Anti-Affinity Rules**
Runtime governance through automated DRS rule generation
- Risk & Outlier Analysis**
Advanced analysis of config outliers and unusual workloads
- ...

Benefits of this Approach

- Cross-platform coverage & enterprise scalability
- Rule-driven multi-strategy approach
- Considers business, process and technical constraints
- Flexible What-If? analysis allows exploration of options
- Unbiased results based on up to date information
- Single solution for transformation and long-term operation
